

PROFILE

I have currently finished my Capstone project at FPT University. I am most confident in Java, but I want to focus on doing front-end so I want to become a front-end developer. I am considered myself a team-player because I like to help others, learn more experience through the working process, and tend to work well within the group. I hope I can use all the things I learned from the university to good use for the job. I am always eager to learn new languages and technologies and I have good self-learning skills.
